

FS Commercial Landscape was started in 1976 by G. John Wood after graduation from Cal Poly Pomona with a degree in Park Administration/Horticulture. The company grew to where it is now with over 150 employees by emphasizing expertise, communication, team work and quality control. FS focuses primarily on commercial landscape maintenance, tree trimming, and renovation of older commercial landscapes, water conservation, drip conversion, irrigation repair and redesign.

The company has several degreed experts and staff certified in pest control, certified arborists and certified irrigators. Mr. Wood writes a monthly newsletter to keep customers updated on seasonal priorities, new products and updates in the landscape industry.

FS does work for some of the largest and smallest companies in the country including Prologis, UPS, Nestle, Unire Properties, CBRE, Vogel Properties, Sears, Ontario Sports Arena, Jurupa Community Services District, and has done consultation for Disneyland Anaheim CA, Ritz Carlton, Double Tree, parks, etc.

Our employees are uniformed, trained, equipped properly for both safety and efficiency. Each crew writes a daily work report of their property of the day and takes pictures with camera phones to explain clearly a problem or condition that may need attention. All account managers and irrigators communicate by phone and email to all customers. Pictures of irrigation repairs are sent with estimates prior to work being done.

F. S. Commercial Landscaping Maintenance - California

F.S. Commercial Landscape provides only the highest quality landscape maintenance services to businesses in California. We have been maintaining commercial lawns and landscapes since 1976 with expert solutions and advice, and we ensure our clients' properties are safe, healthy, and appealing to employees and guests. Let F.S. Commercial Landscape help your California property look its best with regularly scheduled commercial landscaping maintenance and other services.

About the Weather

100 yrs. ago when I was just getting out of college the big thing we were taught was to recommend drought tolerant plants. Drip systems at that time did not have the options they do today, and not that many people new how to put them in, and how to repair them. Now a day the products and the information out there is very easy [...]
